

# **THIRUVALLUVAR UNIVERSITY**

**SERKKADU, VELLORE – 632 115**

## **DEPARTMENT OF CHEMISTRY**

**MASTER OF SCIENCE IN CHEMISTRY [Under  
Choice Based Credit System (CBCS)] From the  
academic year 2014-15**

**SYLLABUS AND REGULATIONS  
FOR UNIVERSITY DEPARTMENT**

## **ABOUT THE DEPARTMENT**

The department of chemistry was established 2002 as post-graduate research department. The full fledged department was started during academic year 2010-11. The department is offering the M.Sc., M.Phil. and Ph.D courses. The department consists of 6 faculty members, 2 administrative staff, 37 research scholars and 52 PG students. The faculty members have been working on the modern and thrust areas in chemistry with financial support from various national funding agencies such as DST, DRDO, BRNS, UGC etc., and continued to publish quality research papers in both national and international journals.

## **VISION AND MISSION**

### ***Statement of Vision***

The Department of Chemistry of Thiruvalluvar University is determined to educate and graduate rural students. Also, committed to prepare, compete in and contribute to the needs of modern chemical science based industries and academia. To achieve this vision, the department is dedicated to provide a course of study for post-graduate in chemistry which combines curriculum and research oriented project that are high-quality, innovative and intellectually challenging.

### ***Statement of Mission***

The mission of the Department of Chemistry of Thiruvalluvar University is to advance the chemical sciences through the education of post-graduate students in rural society by providing them with quality classroom learning and research opportunities. The department is committed to impart a high standard for excellence in all branches of chemistry by innovative and dedicated teaching at post-graduate level to produce students with good knowledge in chemistry.

**THIRUVALLUVAR UNIVERSITY**  
**Department of Chemistry**  
**M.Sc., Chemistry (University Department)**  
**UNDER CBCS (With effect from 2014-15)**

**The course of study and scheme of examinations**

**1. TITLE:** M.Sc., Chemistry.

**2. YEAR OF IMPLEMENTATION:** June 2014 onwards

**3. COURSE DETAILS:**

Total No. of Semesters	- 04 (Two semesters per year)
No. of theory papers per semester	- 04
Total No. of theory papers	- 16
No. of practical courses per semester	- 03 (upto 3 <sup>rd</sup> semester)
Total No. of Practicals	- 09
Project	- 4 <sup>th</sup> semester

**Total Marks for M.Sc. Degree**

Theory	-1600 marks
Practicals	- 900 marks
Project	- 200 marks
<b>Total</b>	<b>-2700 marks</b>

**4. PREAMBLE OF THE SYLLABUS:**

Master of Science (M.Sc.) in Chemistry is a post graduation course of Thiruvalluvar University. The curriculum is prepared by following the prospectus of various national and international universities. The syllabi are all set to meet the standard of UGC-CSIR (NET) and SLET examinations. The credit system to be implemented through this curriculum would allow students to develop a strong footing in the fundamentals and specialize in the disciplines of his/her liking and abilities. The students pursuing this course would have to develop in-depth understanding of various aspects of chemistry. The conceptual understanding, development of experimental skills, designing and implementation of novel synthetic methods, developing the aptitude for academic and professional skills, acquiring basic concepts for structural elucidation with hyphenated techniques, understanding the fundamental biological processes and rationale towards computer. The project introduced in the curriculum will motivate the students to pursue the research and find a job in reputed pharmaceutical and other industries including abroad.

**5. REQUIREMENT TO APPEAR FOR THE EXAMINATION**

- (i) Minimum 75% attendance required for both theory and practical examinations.
- (ii) Attendance of less than 75% but 65% and above has to pay the condonation fee prescribed by the university.

- (iii) Attendance less than 65% but 55% and above has to compensate the shortage of attendance in the subsequent semester (in the next year).
- (iv) Attendance less than 55% has to rejoin / redo the semester.
- (v) In the case of married woman, the minimum attendance should not be less than 55%.

## 6. PATTERN OF EXAMINATION

Evaluation of Students:

1. All Semester examinations both theory and practical will be of 100 marks each.
2. Student has to obtain 50% marks in all the examinations (both theory and practicals).

**7. FEE STRUCTURE:** As per Thiruvalluvar University norms

## 8. ELGIBILITY FOR ADMISSION

A candidate who has passed the B.Sc., degree examination with Chemistry as the main subject of study of this university or an examination of any other university accepted by the syndicate as equivalent thereto shall be eligible for admission to the M.Sc., degree in chemistry in the university department.

**9. MEDIUM OF INSTRUCTION:** English.

## 10. SCHEME OF EXAMINATION

- The semester examination will be conducted at the end of each semester (Both theory & practical examination), for odd semesters in the month of November/December; for even semester in April/May. All theory examination is conducted for 3 hours irrespective of total marks. However, duration of practical examinations is 6 hours.
- **Theory paper** will be of 75 marks each for university examination and 25 marks for internal evaluation.

### **Theory question pattern**

Section-A	10×2	= 20 marks (50 words; no choice)
Section-B	5×5	= 25 marks (200 words; Either or type)
Section-C	3×10	= 30 marks (500 words; 3 out of 5)

**Total = 75 marks**

### **Internal Assessment**

Test	: 10 marks (best 2 out of 3)
Assignment	: 05 Marks
Seminar	: 10 Marks
<b>Total</b>	<b>: 25 marks</b>

There shall be tutorial / practical / surprise test / home assignment / referencing of research papers / seminar / industrial visit / training course as a part of internal assessment in each semester. The students are supposed to

attend all the tests. The students should note that re-test will not be given to the student absent for the test/s.

**Practical examination** will be of 60 marks each for university examination and 40 marks for internal evaluation.

**Distribution of marks for practical examinations**

University Examination Experiment	: 45 Marks (Procedure 5 marks, Experiment 20 marks, Interpretation 10 marks, Result 10marks)
Practical viva-voce	: 10 marks
Record	: 05 Marks
<b>Total</b>	<b>: 60 marks</b>

Practical Internal Assessment

Number of Experiments	: 10 marks
Performance	: 10 Marks
Test	: 20 Marks
<b>Total</b>	<b>: 40 marks</b>

Passing Minimum in practical examinations

IA	: 20 Marks (50 %)
UE	: 30 Marks (50 %)
<b>Total</b>	<b>: 50 Marks</b>

• For the project report

Report	: 150 marks
Viva-voce	: 50 marks
<b>Total</b>	<b>: 200 Marks</b>

**Distribution of marks for project report (Total of 150 marks)**

Project will be evaluated by the concerned project guide along with a member nominated by the Head of the Department.

Assessment will be done by the departmental committee every month. Evaluation will be on the basis of monthly progress of project work, progress report, referencing, oral, results and documentation.

**Project Guide - 100 marks**

(Dissertation Format – 20 marks; Scope of the research problem – 20 marks; Methodology – 20 marks; Analysis – 20 marks, Results and findings-20 marks)

**Project examiner - 50 marks**

(Dissertation Format – 10 marks; Scope of the research problem – 10 marks; Methodology – 10 marks; Analysis – 10 marks, Results and findings-10 marks)

**Viva-Voce examination – 50 marks**

(Presentation – 20 marks; subject knowledge – 20 marks; Interaction – 10 marks)

**11.** Question papers will be set in the view of the entire syllabus and preferably covering each unit of the syllabus.

**12. STANDARD OF PASSING**

A candidate should get not less than 50% in the university examination, compulsorily, in all papers, including practicals. Also, the candidate who secures not less than 50% marks in the UE and IA examinations put together in any theory paper/practical shall be declared to have successfully passed the examination.

Internal marks will not change. Student cannot repeat internal assessment. If student misses internal assessment examination, s/he will have to score passing minimum in the external examinations only.

**Illustration:** Theory – Internal Assessment -12 marks and University Examination-38 marks

**OR**

Internal Assessment-0 marks and University Examination-50 marks.

There shall be revaluation of answer script of end semester examination, but not of internal assessment papers.

Internal assessment answer scripts may be shown to the concerned student but not end semester answer script.

A candidate shall be declared to have passed the whole examination if the candidate passes in all theory and practical by earning 90 credits in core and elective subjects.

**13. TRANSITORY PROVISION**

This curriculum is valid for three years only, as per UGC norms. Hence, candidates who have undergone M.Sc., Chemistry course in the University department will be permitted to re-appear for next two consecutive years only. After that, he/she has to re-appear for the examinations under new curriculum, regulations, which are in force at that time.

## FIRST YEAR: SEMESTER-I

### CORE-1

### ORGANIC CHEMISTRY-I (Stereochemistry and Reactive Intermediates)

#### Objectives:

- *On successful completion of the course, the students should have a versatile knowledge of aromaticity and to understand the principles and reaction mechanism involving various electrophilic, nucleophilic, addition.*
- *The course also aims to explain basic concepts in stereo chemistry and conformational analysis of organic molecules.*

#### UNIT-I AROMATICITY

Generalization of Aromaticity: Aromaticity of benzenoid and non-benzenoid compounds, Hückel's  $4n + 2$  Rule, Craig's rule, annulenes; Aromatic and Anti-aromatic Ions-Cations, Anions- Cross-conjugated Systems- Annulenes, Fulvenes and Related Systems. Polycyclic Systems: Cyclopropenyl Aromatic Systems- Pentalenes, Heptalenes, Azulenes - Cyclobutadiene and cyclooctatetraene.

#### UNIT-II STEREOCHEMISTRY

Newman, Sawhorse and Fisher projection formulae and interconversions; Molecular symmetry and chirality, Classification of Chiral molecules -R-S notation of simple chiral molecules including substituted biphenyls, allenes, helicenes and spiranes, cyclophanes, Re and Si, Pro R and Pro S notations. Illustrations of homotopic, enantiotopic and diastereotopic hydrogen and prochiral carbons with suitable examples. Compounds with two asymmetric carbons - illustrations of *erythro and threo* nomenclature, E Z notations. Definition with example: Racemic mixture, scalamic mixture, optical purity - enantiomeric excess. Asymmetric synthesis - Cram's rule.

#### UNIT-III CONFORMATIONAL ANALYSIS

Conformation of simple 1,2 disubstituted ethane derivatives, disubstituted cyclohexanes and halocyclohexane and their stereochemical features, conformations and reactivity of cyclohexanol (acylation and oxidation), reduction of cyclohexanone, esterification and hydrolysis of cyclohexane carboxylic acid derivatives. Stereochemistry of cis and trans decalines, hydrindanes, cyclohexene, cyclooctene, cyclononenes.

#### UNIT-IV REACTIVE INTERMEDIATES

Carbocations, carbanions, free radicals, radical cations, radical anions, carbenes and nitrenes, arynes - generation, stability, structure and their reactions in C-C bond and other multiple bond formation.

## **UNIT-V      ADDITION REACTIONS**

Electrophilic and nucleophilic addition reaction to C=C: Syn and anti additions, Electrophilic addition reactions via halonium & carbocation intermediate, hydroboration, regio- & stereochemistry, electrophilic addition to conjugated dienes, Nucleophilic addition to C=X (X = O, NR): Hydroboration, Michael addition, 1, 3 - dipolar additions including click chemistry, Mannich, Stobbe, Darzen, Wittig, Wittig - Horner and Benzoin reactions. Stereochemical aspects to be studied wherever applicable.

## CORE-2

## INORGANIC CHEMISTRY-I

### (Main Group and Coordination Chemistry)

#### Objectives:

- *On completion of this course student will have knowledge of Bonding, structure and reactivities of compounds formed by main group elements, and basic knowledge on acid and base concept.*
- *Fundamental theories describe bonding in coordination complexes and structural and other properties such as spectral and magnetic properties of coordination complexes.*

#### UNIT-I MAIN GROUP CHEMISTRY-1

VSEPR-  $d\pi-p\pi$  bonding, Bent rule; Allotropes of carbon; Hydrides, Oxides and Oxo acids and nitrides of carbon, nitrogen, oxygen, sulphur, halogens and phosphorous - synthesis, structure, bonding and reactivities. Theories of acid and base. The HSAB concept. Theoretical basis of hardness and softness.

#### UNIT-II MAIN GROUP CHEMISTRY-2

Structure and chemical reactivities of boranes, borazines, S-N compounds, phosphazenes and cyclic phosphazene, silicates and silicones; Interhalogen and Noble gas compounds- Hybridisation, Geometry and properties.

#### UNIT-III COORDINATION CHEMISTRY-1

Metal-ligand bonding in transition metal complexes- VBT – CFT and CFSE calculation- MOT for octahedral, square planar and tetrahedral complexes. Factors affecting the magnitude of  $10 Dq$  - evidence for crystal field stabilisation-limitations of VBT, CFT - spectrochemical and Nephelauxetic series, site selection in spinels - Jahn-Teller distortion- MOT for sigma and pi bonding in octahedral complexes and- experimental evidence for pi bonding in octahedral complexes.

#### UNIT-IV COORDINATION CHEMISTRY-2

Terms and states of  $d_n$  ions- electronic spectra of coordination compounds - selection rules – Orgel and Tanabe-Sugano diagram for transition metal complexes. Charge transfer spectra. Magnetic properties of coordination compounds - change in magnetic properties of complexes in terms of spin orbit coupling - temperature independent paramagnetism - spin cross over phenomena. The oxidation state, coordination number, stereochemistry, spectral and magnetic properties of Lanthanides and actinides- applications.

#### UNIT-V COORDINATION CHEMISTRY-3

Structure of coordination compounds - complexes with coordination number one, two, three, four, five and six. - Site preference in trigonal bipyramidal complexes - site preference in square planar complexes - isomerism in five coordinate complexes - Distortion from perfect octahedral symmetry - trigonal

prism - geometrical isomerism in octahedral complexes - optical isomerism in octahedral complexes - Cotton effect - absolute configuration of complexes - stereoselectivity and conformation of chelate rings.

12. Gary Wulfsberg, Inorganic Chemistry.

## CORE-3

## PHYSICAL CHEMISTRY-I (Thermodynamics and Group Theory)

### Objectives:

- To know the limitations of classical thermodynamics in the evaluation of macroscopic properties.*
- *Learn about the various principles involved in group theory.*
- *To know the knowledge about the construction of character tables.*
- *To know the theories of catalytic activity.*
- *To understand the principles and selection rules for IR and Raman spectroscopy.*
- *To learn about the symmetry of hybrid orbital's.*

### UNIT-I THERMODYNAMICS AND NON-IDEAL SYSTEMS

Second law of thermodynamics-Maxwell relations.

Chemical potential- variation of chemical potential with temperature and pressure, Partial molar quantities-Partial molar volume and partial molar heat content, Van't Hoff isotherm.

Fugacity-Determination of fugacity of gases by graphical method and from equation of state-variation of fugacity with temperature and pressure. Fugacity and mixtures of non-ideal gases-Lewis Randal rule-Duhem-Margules equation. Determination of activity and activity coefficient of non-electrolyte (EMF method)-Ionic strength.

### UNIT-II IRREVERSIBLE THERMODYNAMICS

Third law of thermodynamics-Purpose-formulations (Planck, Lewis and Randal)-Thermodynamic properties at absolute zero temperature-calculation of absolute entropies-Apparent exception to third law-Nernst heat theorem.

Thermodynamic criteria for non equilibrium states, generalized flux, forces, matter flow and current flow, entropy production and entropy flow for different irreversible reactions (eg. heat flow, chemical reaction and electrochemical reactions). Non-equilibrium thermodynamics-Basic concepts-Postulates and methodologies-Entropy of irreversible processes-Clausius inequality-Phenomenological equations- Onsager reciprocity relations-Irreversible thermodynamics for biological systems-Coupled reactions.

### UNIT-III GROUP THEORY

Basic concepts of groups, Sub-groups-Group Multiplication tables. Abelian and non-Abelian point groups- Representation of cyclic groups.

Symmetry elements and operations – point groups-assignment of point groups to molecules-Matrix representation of geometric transformation and point groups – reducible and irreducible representations-properties of irreducible representation-Similarity transformation-Classes of symmetry operations. Direct product representation-Mulliken's notations and Schoenflies symbols.

#### **UNIT-IV GROUP THEORY AND ITS APPLICATIONS**

Great Orthogonality Theorem and its consequences-Construction of character tables for  $C_{2v}$ ,  $C_{3v}$  and  $D_{2h}$ .

Applications to molecular vibrations (IR and Raman activity)-Selection rules for IR and Raman spectra-procedure for determining symmetry of normal modes of vibration - Hybrid orbitals in  $BF_3$ ,  $CH_4$  and  $NH_3$ .

Application of group theory for the electronic spectra of ethylene and formaldehyde.

#### **UNIT-V SURFACE CHEMISTRY AND CATALYSIS**

Chemisorption and Physisorption; Langmuir's adsorption isotherm; competitive adsorption-Mechanisms of reactions on surfaces (Langmuir-Rideal, Rideal - Eley mechanism and Langmuir-Hinshelwood mechanisms); measurement of surface area, BET equation and Gibb's adsorption. Surface active agent-Classification of surface active agent, Critical Micellar Concentration (CMC), Factor affecting the CMC of surfactants-Microemulsion-Reverse micelles.

Catalysis by enzymes-Rate of enzyme catalysed reactions, effect of pH and temperature on enzyme catalysed reactions-Inhibition. Semiconductor oxides and absorption coefficient and its significance.

## **ELECTIVE – 1A                      DRUG DESIGN, DELIVERY AND ACTION**

*Objectives:*

- *Students should be able to understand concepts of drug design and mechanism of drug action of different drugs.*
- *Students will be aware of metabolism and delivery methods of different classes of drugs.*

### **UNIT-I                      DRUG DISCOVERY**

An introduction to drugs and receptors, Drug-Receptor interactions, Neurotransmission-Neurotransmitters.

History of drug discovery, Strategies in lead discovery: Ethnopharmaceutical sources, Plant sources, Animal sources, marine sources, drug metabolism studies, observation of side effects.

Lead Optimization methods: Stereochemistry, Bioisosterism, SAR studies. High throughput Screening.

### **UNIT-II                      DRUG DESIGN**

Drug design strategies-rational drug design: Inhibitors of ACE; structure based drug design: Anti HIV agents; ligand based approach.

Design of agonist and antagonist:  $\beta_2$ -Agonists and the treatment of asthma, Discovery of the H<sub>2</sub>-receptor antagonists

Transition state analogues, Pro drug concept: prodrugs of ampicillin, elanapril, propranolol.

### **UNIT-III                      DRUG ACTION**

Pharmacological activity – Antibiotics: Penicillin; Antimalerials: Trimethoprim; NSAIDs: Paracetamol, Ibuprofen, Diclophenac sodium, Sedatives-Phthalidomide, Hypnotics, Antidepressants: Fluoxetine, Anti-histamines, Anti-tuberculosis agents: Isoniazide , Anti-cancer agents: Vinblastine, Taxol

### **UNIT-IV                      DRUG METABOLISM**

Adsorption, distribution, metabolism and elimination: Methods of drug administration, drug solubility and lipophilicity, clogP. cell membrane permeability, blood brain barrier Lipinski's rule of five. Metabolism- first pass metabolism, chemical and metabolic stability, bioavailability and bioequivalence, concept of drug half life, therapeutic window.

### **UNIT – V                      TYPES OF DRUG DELIVERY SYSTEMS**

Types of drug delivery systems, Introduction to Gene Therapy, Types of gene delivery systems, Introduction to targeting, Passive and active targeting, Liposomes, strategies for brain drug delivery, bio distribution, evaluation and applications, time release systems, osmotic systems.

## **ELECTIVE – 1B MODERN SEPARATION TECHNIQUES**

### *Objectives:*

- *The students should be able to know the purification and extraction techniques.*
- *This paper enables a student to understand the basic principles of various chromatographic techniques.*
- *The students should be able to understand the advanced microscopic techniques.*

### **UNIT-I PURIFICATION TECHNIQUES**

Desiccants: types and choice of desiccants, drying of solids. Precipitation: types of precipitation, factors affecting the precipitation. Distillation: theory of distillation. Fractional, steam, azeotropic, vacuum distillations. Recrystallization, Sublimation.

### **UNIT-II EXTRACTION TECHNIQUES**

Solvent extraction: Principle and techniques. Distribution ratio and distribution coefficient. Factors affecting extraction efficiency: Ion association complexes, chelation, synergistic extraction, pH. Numericals based on multiple extractions. Role of chelating ligands, crown ethers, calixarenes and cryptands in solvent extraction. Introduction to Solid phase extraction (SPE) and Microwave assisted extraction (MAE). Applications.

### **UNIT-III CHROMATOGRAPHY**

Definition and Classification. Techniques used in Paper, Thin Layer and Column chromatography. Principle, instrumentation and applications of Gas chromatography(GC), Gas-Liquid chromatography (GLC), High performance liquid chromatography (HPLC), paper electrophoresis. Applications in qualitative and quantitative analysis.

### **UNIT-IV ION EXCHANGE CHROMATOGRAPHY**

Principle and technique. Types of ion exchangers. Ion exchange equilibria. Ion exchange capacity. Effect of complexing ions. Zeolites as ion-exchangers. Applications.

### **UNIT-V MICROSCOPIC ANALYSES**

Scanning Electron Microscopy, Tunneling Electron Microscopy, Scanning Tunneling Microscopy and Atomic Force Microscopy- Principle, Instrumentation and Applications.

### **Reference Books**

5. G. D. Christian and J.E.O Reilly, Instrumental Analysis, Allyn and Bacon Inc, II Edn., 1986.

## **ELECTIVE -1C CHEMISTRY IN DAY TO DAY CONTEXT**

### *Objectives*

- *To enable the students to understand the role of chemistry in energy production from renewable resources.*
- *To teach the importance of various types of fuels and their applications.*
- *To create awareness on environmental pollution.*
- *To impart the knowledge on the chemistry of soaps detergents and dyes.*
- *To enable the student to understand chemistry in agriculture.*

### **UNIT-I CHEMISTRY IN ENERGY PRODUCTION**

Solar energy – fuel from sun light – splitting of water – hydrogen from sunlight – hydrogen economy - fuel cells - batteries - photovoltaics - stealing the sun - nuclear energy - nuclear fission and fusion - production of electricity by a nuclear reactor - radioactivity and the hazards of radioactivity – living with nuclear power.

### **UNIT-II ENVIRONMENT**

The air we breathe - composition of air - burning of hydrocarbons - fog - air quality -ozone - oxygen/ozone screen - biological effect of UV radiation - ozone formation and distribution in the atmosphere - paths of ozone destruction - chlorofluorocarbons and their interactions with ozone – the Antarctic ozone hole.

### **UNIT-III CHEMISTRY OF GLOBAL WARMING**

Chemistry of global warming - green house effect - earth's energy balance - vibrating molecules and the green house effect – molecular response to radiation – methane and other green house gases – climate modeling.

### **UNIT-IV AGRICULTURAL CHEMISTRY**

Fertilisers - classification - characteristics and uses - pesticides and insecticides - a brief study of additives use and abuse of additives in foods and beverages.

### **UNIT-V DYES, SOAPS AND DETERGENTS**

Dyes - classification based on mode of application and structure - paints - ingredients -drying – pigments – types and properties – varnish. Soaps and detergents - classification - ingredients - solids and liquids - disinfectants (phenyl, dettol type) - perfumes - raw materials - perfumes used in soaps - cosmetics and agarbatti.

2. M.Gopala Rao, Outlines of Chemical Technology – For the 21<sup>st</sup> Century – & Marshall Sittig, 3 rd Edition.
3. Bailey, Clark, Ferris, Isrause, Strong, Chemistry of the environment, 2<sup>nd</sup> Edn, 2001, Elsevier publications.
4. Energy resources and the environment, V. K. Prabhakar, 2001.
5. Fundamental Concepts of Applied Chemistry, Jayashree Ghosh, S.Chand, 2005

## **PRACTICAL-1**

### **ORGANIC CHEMISTRY PRACTICAL – I**

1. Identification of components in a two component mixture and preparation of their derivatives- Any six binary mixtures.
2. Determination of m.p. of solid compounds or derivatives.

#### **Reference Books**

1. Arthur I. Vogel, "A Textbook of Practical Organic Chemistry", ELBS.
2. N.S. Gnanapragasam and B. Ramamoorthy, "Organic Chemistry Lab Manual" (2006), S. Visvanathan Printers & Publishers.
3. Raj K. Bansal, Laboratory Manual of Organic Chemistry, Wiley Eastern Limited.
4. Mann and Saunders, Laboratory manual of Organic Chemistry.

## **PRACTICAL-2**

### **INORGANIC CHEMISTRY PRACTICAL – I**

#### **Semi micro qualitative analysis of inorganic mixture containing two common and two rare earth cations.**

The following are the rare earth cations to be identified.

W, Se, Te, Mo, Ce, Th, Ti, Zr, V, Be, U, Li.

1. J.Mendham, R.C.Denney, J D Barnes, M. Thomas and B. Sivasankar, Vogel's text book of quantitative chemical analysis, Pearson Education Ltd., Indian subcontinent edition, 2009.
2. V.V. Ramanujam, "Inorganic Semi Micro Qualitative Analysis", 3rd Edn. The National Publishing Company (1994 reprint 2004)

## **PRACTICAL-3**

### **PHYSICAL CHEMISTRY PRACTICAL – I**

1. Kinetics – Acid Hydrolysis of Ester – Comparison of strengths of acids.
2. Kinetics – Acid Hydrolysis of Ester – Determination of Arrhenius parameters.
3. Kinetics – Persulphate – Iodide Reaction – Determination of order, effect of Ionic strength on rate constant.
4. Kinetics of saponification of ester.
5. Primary salt effect (Clock reaction) for the reaction between persulphate and iodide.
6. Kinetics of iodination of acetone.
7. Distribution Law – Study of Association of Benzoic Acid in Benzene.
8. Adsorption – Oxalic Acid \ Acetic Acid on charcoal using Freundlich isotherm.
7. Study of phase diagram of two components forming simple eutectic.
8. Study of inversion of cane sugar in the presence of acid using polarimeter.
9. Study the salt effect on the reaction between acetone and iodine.
10. Determination of molecular weight by Rast method.
11. Study of the equilibrium constant of the reaction between KI and I<sub>2</sub>.
12. Distribution of acetic acid between water and chloroform.

## **Reference Books**

2. Findlay`s practical Physical Chemistry ,`Revised and edited by B.P. Levitt, 9th edn., Longman, London, 1985.
3. J.N,Gurtur and R.Kapoor,"Advanced Experiemental Chemistry," Vol.I, S.Chand & Co., Ltd., New Delhi.

## SEMESTER-II

**CORE-4**

### **ORGANIC CHEMISTRY-II (Organic Reaction Mechanisms and Rearrangements)**

**Paper Code: TUCH21**

*Objectives:*

- *This paper explains the basic concepts of substitution reaction and elimination reaction. Mechanism of some of the important rearrangements in organic chemistry will be discussed.*
- *In addition the students will gain knowledge on reaction mechanism and synthetic application of oxidation and reduction reactions in organic synthesis.*

#### **UNIT-I SUBSTITUTION REACTIONS**

Aliphatic Substitution Reactions: Mechanism of aliphatic substitution reactions - $S_N1$ ,  $S_N2$ ,  $S_Ni$ , mechanism- non-classical carbocations-Neighboring group participation. Substitution at carbonyl, vinylic and bridgehead systems - substitution by ambident nucleophiles- HVZ reaction, Stark-Enamine reaction. Aliphatic electrophilic substitution:  $SE1$ ,  $SE2$  and  $SEi$  mechanism. Aromatic Substitutions: Electrophilic substitution-the arenium ion mechanism. Orientation and reactivity (ortho, meta and para directing groups). Typical reactions including Vilsmeier - Haack, Schilman reaction-Synthesis of di and trisubstituted benzene (symmetrical tribromo benzene, 2-amino-5-methylphenol, 3-nitro-4-bromobenzoic acid, 3,4-dibromonitrobenzene) starting from benzene. Nucleophilic substitution - methods for the generation of benzyne intermediate and reactions. Chichibabin reaction.

#### **UNIT-II ELIMINATION REACTIONS**

$E1$ ,  $E2$  and  $E1cB$  mechanism -  $E1$ ,  $E2$  and  $E1cB$  spectrum - Orientation of the double bond -Hoffman and Saytzeff rules - Competition between elimination and substitution. Chugaev and Cope eliminations. Typical eliminations reactions - dehydration, dehydrohalogenation and dehalogenation. Stereochemistry of  $E2$  eliminations in cyclohexane systems. Mechanism of pyrolytic eliminations.

#### **UNIT-III OXIDATION AND REDUCTION REACTIONS**

Oxidation: Carbon Oxidation Number -Calculation. Study of the following oxidation reactions: chromium trioxide, Osmium tetroxide, DDQ, Chloranil-Alkenes to epoxides and dihydroxy compounds; Oxidation of alcohols using PCC, PDC, Jones, Dess-Martin oxidation; Sharpless epoxidation, Oppenauer oxidation, Oxidation using DMSO,  $KMnO_4$ ,  $Pb(OAc)_4$ ,  $SeO_2$ , Ozonolysis.

Reduction: Selectivity in reduction of 4-t-butylcyclohexanone using selecterides. Hydride reductions - reduction with  $LiAlH_4$ ,  $NaBH_4$ , tritertiarybutyloxyaluminium hydride, sodium Cyanoborohydride, trialkyltin hydride, hydrazines. MPV reduction, Birch reduction, Asymmetric reduction-Itsuno, Corey and Nyori.

#### **UNIT-IV MOLECULAR REARRANGEMENTS**

A detailed study with suitable examples of the mechanism of the following rearrangements: Wagner - Meerwein, Demjanov, Dienone - phenol, Favorski, Baeyer - Villiger, Wolf, Stevens (in cyclic systems) Sommet Hauser and Von Richter rearrangements.

#### **UNIT-V NAMED REACTIONS AND REAGENTS IN ORGANIC SYNTHESIS**

Reagents: Lithium dialkyl cuprates, lithium diisopropylamide(LDA), Dicyclohexylcarbodiimide(DCC), Trimethyl silyl iodide. Named Reactions: Mannich reaction, Biginelli Reaction, Henry reaction, Perkin reaction, McMurry coupling, Robinson annulation, Bischler-Napieralski reaction, Buchwald-Hartwig amination, Baylis-Hillmann reaction. Pd catalysed coupling reactions: Stille, Negishi, Heck, Suzuki, Glazer-Ellington coupling. Miyamura, Barton and Shapiro reaction, Hoffmann-Löffler-Freytag reactions.

#### **Reference Books**

## CORE- 5

## INORGANIC CHEMISTRY-II

### (Coordination and Organometallic Chemistry)

Objectives:

- *On completion of the course the students will have the knowledge of fundamental mechanism of reactions of coordination complexes*
- *Basic concepts of bonding in organometallic chemistry, and synthesis, structure, reactivity and uses of different organometallic complexes.*

### UNIT-I COORDINATION REACTIONS

Substitution reactions in square planar complexes – Trans effect- Theories of trans effect – Reaction mechanism and kinetics of nucleophilic substitution in octahedral complexes - reaction rates influenced by acid and bases - racemisation and isomerisation - mechanisms of redox reactions - outer sphere mechanisms - excited state outer sphere electron transfer reactions - inner sphere mechanisms –Marcus-Hush theory- mixed valent complexes.

### UNIT-II ORGANOMETALLICS-1

Definition of organometallic compound - 18 electron rule - EAN rule - classification of organometallic compounds - the metal carbon bond types - ionic bond - sigma covalent bond - electron deficient bond - delocalised bond - dative bond-Metal carbonyl complexes – preparation, structure, reactivities and vibrational spectra of metal carbonyls- metal carbonyl clusters - Wades rule and isolobal relationship - metal nitrosyls - dinitrogen complexes - dioxygen complexes.

### UNIT-III ORGANOMETALLICS-2

Metal alkyl complexes - stability and structure - synthesis by alkylation of metal halides - by oxidative addition - by nucleophilic attack on coordinated ligands - metal alkyl and 18 electron rule - reactivity of metal alkyls - M-C bond cleavage reactions - insertion of CO to M-C bonds - double carbonylation - insertions of alkenes and alkynes - insertions of metals with C-H bonds- Pi-complexes with unsaturated molecules- alkene, alkyne, allyl, dienyl and trienyl complexes-preparation, bonding and structure and applications.

### UNIT-IV METALLOCENES

Cyclopentadienyl complexes - metallocenes – synthesis, bonding and reactions- bent sandwich complexes - bonding in bent sandwich complexes - metallocene halides and hydrides - metallocene and stereospecific polymerisation of 1-alkenes - cyclopentadiene as a non-spectator ligand - Half-sandwich complexes

-synthesis and structures of allyl complexes -arene complexes - synthesis - structure and reactivity of arene complexes - multidecker complexes.

## **UNIT-V ORGANOMETALLIC CATALYSTS**

Organometallic compounds in homogeneous catalytic reactions - coordinative unsaturation - acid-base behaviour reaction - migration of atoms or groups from metal to ligand - insertion reaction - reactions of coordinated ligands - catalytic reactions of alkenes - isomerisation of alkenes-hydrogenation-hydroformylation-wacker process- Wilkinson catalyst- hydrosilation of alkenes - alkene polymerisation and oligomerisation- Zeigler-Nata catalyst - fluxional molecules.

### **Reference Books**

1. Organometallics 1, complexes with transition metal-carbon -bonds, Bockmann, Oxford science publications, Oxford, 1996.
2. Organometallics 2, complexes with transition metal-carbon -bonds, Bockmann, Oxford science publications, Oxford, 1996.
3. Basic organometallic chemistry, J. Haiduc and J. J. Zuckerman, Walter de Gruyter, Berlin, 1985.
4. Inorganic Chemistry - Principles of structure and reactivity, J. E. Huheey Harper International Edition, Harper and Rone New York, 1978.
5. Advanced Inorganic Chemistry, F. A. Cotton and G. Wilkinson, Fourth Edition.
6. Inorganic Chemistry- Gary L. Miessler and Donald A. Tarr, pearson education, Inc

## CORE-6

## PHYSICAL CHEMISTRY-II

### (Chemical Kinetics and Quantum Chemistry)

#### Objectives:

- *To elucidate the use of chemical kinetics in understanding reaction mechanisms and to apply the theories and concepts of it for homogeneous and heterogeneous catalysed reactions.*
- *To understand and appreciate the quantum mechanical approach to the atomic and molecular electronic structure.*
- *To become familiar with the required mathematics for solving quantum mechanical problems.*
- *To know the limitations of quantum chemistry and classical thermodynamics in the evaluation of macroscopic properties.*
- *To understand the inter linking of quantum chemistry and statistical thermodynamics that leads to classical thermodynamics.*
- *To apply the concepts of statistical thermodynamics for the study of equilibrium reactions and reaction rates.*

#### UNIT-I CHEMICAL KINETICS-I

Collision theory of reaction rates-Steric factor-Lindemann's theory.

Probability factor- potential energy surfaces and contour diagrams- Principle of microscopic reversibility - Steady-state approximation- Theory of absolute reaction rates-Comparison of transition state theory with collision theory-Eyring equation-Thermodynamic and partition function approaches-significance of entropy and enthalpy of activation-linear free energy relationships-Hammett and Taft equations-kinetic isotopic effect- Partition function and activated complex.

#### UNIT-II CHEMICAL KINETICS-II

Application of Arrhenius equation to solution kinetics - influence of solvent, ionic strength, dielectric constant and pressure on rates in solution - Rate expressions for opposing, parallel and consecutive reactions; Chain reactions-Rice-Herzfeld mechanism.Explosions.

Acid-Base catalysis-Mechanism-Bronsted catalysis law-Skramm diagram-prototropic and protolytic mechanisms-acidity function.

Fast reactions-Laser Flash photolysis, flow technique and relaxation methods.

#### UNIT-III QUANTUM CHEMISTRY-I

Inadequacy of classical mechanics, Black body radiation, Planck's radiation law-Photoelectric effect-Compton effect- Bohr's theory of hydrogen atom-Hydrogen spectra, Wave-particle dualism, Uncertainty principle-Schrödinger equation-1D and 3D, Postulates of quantum mechanics.

Operators: Algebra operator, commutation operator, linear and hermitian operator, eigen functions and eigen values, angular momentum operator.

Applications of Schrödinger equation to simple systems-particle in a box, one and three-dimensional-Orthogonalisation and normalisation-QM tunneling.

## **UNIT-IV QUANTUM CHEMISTRY-II**

Applications of wave mechanics- Rigid rotator, Harmonic oscillator – Hydrogen atom solution-Origin of quantum mechanics.

Approximation methods–Variation methods, Perturbation method for non-degenerate systems-Slater determinant-Anti-symmetric wave functions-Application to Helium atom-Born-Oppenheimer approximation.

Spin orbit interaction, L-S and j-j coupling schemes–Hartree-Fock SCF method for many electron systems. Application of HMO treatment to ethylene, butadiene and benzene.

## **UNIT-V STATISTICAL THERMODYNAMICS**

Classical statistics-Maxwell-Boltzmann (MB) statistics-Phase space-Sterling approximation-Derivation of distribution function-Contradiction of MB statistics with Heisenberg uncertainty principle. Other forms of MB distribution function.

Quantum statistics-Bose-Einstein (BE) and Fermi-Dirac (FD) statistics-Derivation of distribution function-MB, BE and FD statistics comparison-Partition function-Translational and rotational partition function (Problem only)-Ortho and para hydrogen.

Debye and Einstein heat capacity of solids-Assumptions-Merits and limitations. Negative Kelvin temperature.

## **COMPULSORY PAPER**

### **HUMAN RIGHTS**

#### **UNIT-I HISTORICAL DEVELOPMENT AND THEORIES**

Definition of Human Rights - Nature, Content, Legitimacy and Priority - Theories on Human Rights - Historical Development of Human Rights.

#### **UNIT-II INTERNATIONAL HUMAN RIGHTS-1**

Prescription and Enforcement up to World War II - Human Rights and the UNO-Universal Declaration of Human Rights - International Covenant on Civil and Political Rights - International Covenant on Economic, Social and Cultural Rights and Optional Protocol.

#### **UNIT-III HUMAN RIGHTS DECLARATIONS**

U.N. Human Rights Declarations - U.N. Human Commissioner.

#### **UNIT-IV INTERNATIONAL HUMAN RIGHTS-2**

Amnesty International - Human Rights and Helsinki Process - Regional Developments - European Human Rights System - African Human Rights System - International Human Rights in Domestic courts.

#### **UNIT-V HUMAN RIGHTS FOR CHILDREN AND WOMEN**

Contemporary Issues on Human Rights: Children's Rights - Women's Rights - Dalit's Rights - Bonded Labour and Wages - Refugees - Capital Punishment. Fundamental Rights in the Indian Constitution - Directive Principles of State Policy - Fundamental Duties - National Human Rights Commission.

#### **Reference Books**

1. International Bill of Human Rights, Amnesty International Publication, 1988.

2. Human Rights Today, Columbia University
3. International Instruments of Human Rights, UN Publication
4. Human Rights Quarterly, John Hopkins University, U.S.A.

## **ELECTIVE-2A**

## **SUPRAMOLECULAR AND NANO CHEMISTRY**

*Objectives:*

- *On completion of the course the student should know the basis of supramolecular chemistry, metal-organic framework solids, nano materials and their applications.*
- *Various techniques available to characterize the advanced Inorganic materials*

### **UNIT-I SUPRAMOLECULAR CHEMISTRY**

Introduction to supramolecular chemistry- Definitions and classification of non-covalent interactions- supramolecular synthons-Molecular recognition-self assembly- Supramolecular chemistry of metal containing compounds-1D, 2D, 3D- Host-Guest compounds-Alpha-, Beta-, Gamma-cyclodextrins..

### **UNIT-II FRAMEWORK SOLIDS**

Introduction-definition of porosity, pore size, pore volume, pore density-zeolites-synthesis and applications-metal organic framework solids-definition-classifications- uses of different types of organic ligands- tuning of structure and properties - synthetic methods- Advantage of MOF solids over zeolites-cracking of petroleum products

### **UNIT-III NANOCHEMISTRY**

General introduction to nanomaterials and emergence of nanotechnology; Synthesis of nanoparticles of ZnO<sub>2</sub>, TiO<sub>2</sub>, silver, gold, rhodium, palladium, platinum, and; carbon materials- fullerene- porous nano carbon(PNC)-synthesis

Techniques of synthesis: electroplating and electro-phoretic deposition, conversion through chemical reactions and lithography; Thin films:Chemical vapor deposition and Atomic layer deposition techniques; Carbon fullerenes and nanotubes.

### **UNIT-IV ANALYTICAL TECHNIQUES**

Electronic microscopes- SEM – TEM - X-ray diffraction-EXAFS - Nitrogen adsorption-desorption method-TG/DTA/DSC methods-instrumentation and interpretations and applications.

### **UNIT-V ADVANCED INORGANIC MATERIALS**

Applications of Advanced Inorganic materials in catalysis-gas adsorption-gas storage-sensors.

### **Reference Books**

1. Supramolecular chemistry, J.M.Lehn, VCH
2. C.N.R. Rao, A. Muller, A.K. Cheetam (Eds), The Chemistry of Nanomaterials, Vol.1, 2, Wiley – VCH, Weinheim, 2004

5. Metal-Organic Frameworks Applications from Catalysis to Gas Storage. Cejka, J, ed. (2011). Wiley-VCH. ISBN 978-3-527-32870-3
6. Zeolites and Catalysis: Synthesis, Reactions and Applications. Jiri Cejka; Avelino Corma; Stacey Zones (2010). John Wiley & Sons. ISBN 978-3-527-63030-1.

## **ELECTIVE-2B**

### **INORGANIC PHOTOCHEMISTRY**

#### *Objectives:*

- *On the completion of the course the student will have the knowledge of basic principle of inorganic photochemistry*
- *Instrumentation techniques used in Inorganic photochemistry*
- *Application of photochemical properties such as sensitizer of Inorganic compounds.*

#### **UNIT-I PHOTOPHYSICAL PROCESSES**

Absorption, excitation, photochemical laws, quantum yield, electronically excited states, life times-measurements of the times. Flash photolysis, energy dissipation by radiative and non-radiative processes, absorption spectra, Frank-Condon principle, photochemical stages-primary and secondary processes.

#### **UNIT-II METAL COMPLEXES**

Excited states of metal complexes: Comparison with organic compounds, electronically excited states of metal complexes, charge transfer spectra, charge transfer excitations.

#### **UNIT-III PHOTOREACTIONS**

Photosubstitution, photooxidation and photoreduction, lability and selectivity, zero vibrational levels of ground state and excited state, energy content of excited state, zero-zero spectroscopic energy, development of the equations for redox potentials of the excited states.

#### **UNIT-IV REDOX REACTIONS**

Energy transfer under conditions of weak interaction and strong interaction-examples formation; condition of the excited states to be useful as redox reactants, excited electron transfer, metal complexes as attractive candidates, (2,2-bipyridine and 1,10-phenanthroline complexes), illustration of reducing and oxidising character of  $[\text{Ru}(\text{bipy})_3]^{2+}$  complex, comparison with  $[\text{Fe}(\text{bipy})_3]^{2+}$ ; role of spin-orbit coupling-life time of these complexes. Application of redox processes of electronically excited states for catalytic purposes, transformation of low energy reactants into high energy products, chemical energy into light.

#### **UNIT-V APPLICATIONS**

Metal complex sensitizer, electron relay, metal colloid systems, semiconductor supported metal or oxide systems, water photolysis, nitrogen fixation and carbon dioxide reduction.

**Reference Books:**

6. D.M. Roundhill, "Photochemistry and photophysics of Metal complexes", Springer;Edition, 1994.

## MATERIALS CHEMISTRY

### ELECTIVE-2C

*Objective:*

- *On completion of this course the students will have the knowledge of Principle involves in preparative technique, mainly, used to synthesize useful materials Importance of some useful properties of solid materials*

#### UNIT-I MATERIAL DESIGN

Materials and their classification, Role of Chemistry in Material design. General methods of synthesis of inorganic materials—homogeneous nucleation and heterogeneous nucleation, growth of nuclei and factors of importance; synthesis of metallic, semiconductor and metal oxide nano particles.

#### UNIT-II PREPARATIVE TECHNIQUES

Ceramic methods; chemical strategies, chemical vapour deposition-MOCVD; preparation of nanomaterials, Langmuir- Blodgett Films. Fabrication of ordered nanostructures . Composition and purity of materials.

#### UNIT-III SUPERCONDUCTORS

Structural features of cuprate superconductors. 1-2-3 and 2-1-4 cuprates; structure. Normal state properties: anisotropy and temperature dependence of electrical resistance. Superconducting state: heat capacity, coherence length, relation between  $T_c$  and hole concentration in cuprates; mechanism of superconductivity in cuprates. Applications of high  $T_c$ -cuprates.

#### UNIT-IV FUNCTIONAL ORGANIC MATERIALS

Conducting organics - charge transfer materials and conducting polymers. Organic superconductors. Fullerenes. Molecular ferromagnets and ferroelectrics. Liquid crystals: mesomorphic behaviour, optical properties of liquid crystals, display devices.

#### UNIT-V NLO MATERIALS

Second and third order non-linear effects; molecular rectifiers and frequency doublers; unimolecular electronic devices. Photochromic materials; optical data storage, memory and switches.

#### Reference Books:

1. A.R. West, Solid State Chemistry and its Applications, (1984) John Wiley & Sons, Singapore.
2. T. V. Ramakrishnan and C.N.R. Rao, Superconductivity Today, (1992) Wiley. Eastern Ltd., New Delhi . N R. Rao and J. Gopalkrishnan, New Directions in Solid State Chemistry, (1997) Cambridge Univ. Press.
3. P. Ball, Designing the Molecular World: Chemistry at the Frontier, (1994) Princeton Univ. Press.

## **PRACTICAL-4**

### **ORGANIC CHEMISTRY PRACTICAL – II**

**Any FOUR preparations from the following single stage preparations:**

1. Preparation of p-benzoquinone from hydroquinone
2. p-Nitrobenzoic acid from p-nitrotoluene
3. Acetyl salicylic acid from salicylic acid
4. Benzhydrol from benzophenone
5. Preparation of 2,5-di-t-butylhydroquinone
6. 1,2,3,4 - Tetrahydrocarbazole from cyclohexanone
7. Preparation of dibenzylidene acetone
8. 2,3 - Dimethylindole from phenyl hydrazine and 2 - butanone

**Any THREE preparations from the following involving two stages**

1. sym-Tribromo benzene from aniline.
2. Benzanilide from benzophenone
3. m-Nitro benzoic acid from methyl benzoate
4. 2,4.- Dinitrobenzoic acid from p-nitrotoluene
5. m-Nitro benzoic acid from benzaldehyde
6. Phthalide from phthalic anhydride
7. 2-Phenyl indole from phenyl hydrazine
8. 2, 4-dinitrophenyl hydrazine from p-nitrochlorobenzene

**Any TWO exercises in the extraction of natural products**

Caffeine from tea leaves

Lactose from milk

Citric acid from lemon

Piperine from black pepper

#### **Reference Books**

1. Arthur I. Vogel, "A Textbook of Practical Organic Chemistry", ELBS.
2. N.S. Gnanapragasam and B. Ramamoorthy, "Organic Chemistry Lab Manual" (2006), S. Visvanathan Printers & Publishers.

## **PRACTICAL-5**

## **INORGANIC CHEMISTRY PRACTICAL – II**

### **Complexometric titrations**

Estimation of  $\text{Ca}^{2+}$ ,  $\text{Mg}^{2+}$ ,  $\text{Zn}^{2+}$  and  $\text{Ni}^{2+}$  using EDTA  
Determination of Hardness of water

### **Preparation of the followings:**

Potassium tris (oxalate) aluminate (III) trihydrate  
Tris (thiourea) copper (I) chloride  
Potassium tris (oxalato) chromate (III) trihydrate  
Sodium bis(thiosulphato) cuprate (I)  
Sodium hexanitrocobaltate (III)  
Chloropentammine cobalt (III) chloride  
Bis (acetylacetonato) copper (II)  
Hexamminenickel (II) chloride  
Bis (thiocyanato) pyridine manganese (II)

### **Colorimetric Analysis**

Photoelectric method: Estimation of iron(III), nickel(III) and manganese(VII).

### **Reference Book**

J.Mendham, R.C.Denney, J D Barnes, M. Thomas and B. Sivasankar, Vogel's text book of quantitative chemical analysis, Pearson Education Ltd., Indian subcontinent edition, 2009.

**PRACTICAL-6****PHYSICAL CHEMISTRY PRACTICAL – II****Paper Code: TUCH27****Conductometric Titrations:**

1. Determination of the equivalent conductance of a weak acid at different concentrations and verify Ostwald's dilution law and calculate the dissociation constant of the acid.
2. Determination of equivalent conductance of a strong electrolyte at different concentrations and examine the validity of the Onsager's theory as limiting law at high dilutions.
3. Determination of equivalent conductance of a strong electrolyte and verification of Debye - Huckel - Onsager Equation
4. Verification of Ostwald's Dilution law for a weak electrolyte.
5. Determination of  $PK_a$  values of weak acids and weak bases.
6. Conductometric titrations of a mixture of acids (HCl,  $CH_3COOH$ ) and NaOH.
7. Conductometric titrations of mixtures of two components.
  1. Acid-Base titrations.
  2. Precipitation titrations.
  3. C. Displacement titrations.
8. Mixture of halides

**Reference Books**

## SECOND YEAR: SEMESTER-III

### **CORE-7**

### **ORGANIC CHEMISTRY-III (Advanced Organic Chemistry)**

*Objectives:*

- *On successful completion of the course the students should have*
- *Learnt the basic principles of organic spectroscopy*
- *Learnt the structural analysis using spectral data*
- *Learnt the basic principles of photochemistry and electrocyclic reactions*
- *Learnt the pericyclic reactions*

#### **UNIT-I UV & IR**

UV-Visible spectroscopy: Introduction- types of electronic transitions – chromophores and auxochromes – factors influencing positions and intensity of absorption bands, Woodward-Fieser rules for conjugated dienes, carbonyl compounds and enones, ultraviolet spectra of aromatic and heterocyclic compounds.

IR spectroscopy: Introduction- finger print region – Far IR region Applications of IR spectroscopy to identify alkane, alkene, alkyne, aromatic compounds, nitrile and aromatic residues, Identification of alcohols, ethers, phenols, amines and carbonyl compounds such as ketones, aldehydes, esters, amides, acids, conjugated carbonyls compounds and other functional groups- Effect of hydrogen bonding and effect of solvent on vibrational frequencies.

#### **UNIT-II NMR**

Introduction-Nuclear spin states- Nuclear Magnetic moments-Absorption of Energy-Resonance- Instrumentation: Continuous wave method, FT NMR- chemical shift and its measurements, factors affecting the chemical shift including anisotropic effect-relaxation processes-spin-spin coupling-coupling constant –multiplicity-spin systems-NOE effects-<sup>1</sup>H NMR of simple aliphatic and aromatic compounds.

Principles of <sup>13</sup>C NMR,- proton decoupled and off – resonance <sup>13</sup>C NMR spectra – DEPT methods- factors affecting <sup>13</sup>C chemical shift -<sup>13</sup>C NMR spectra of simple organic molecules.

Problem solving (for molecules with a maximum number of C10).

#### **UNIT-III MASS & PROBLEM SOLVING**

Introduction- Principles- Instrumentation-Ionization techniques such as Chemical ionization, Electron ionization, ESI, FD, FAB, MALDI. Applications of mass spectra to elucidate molecular formula and structure. Mc. Lafferty rearrangement-Nitrogen rule-Interpretation of fragmentation pattern of aliphatic alcohols, aldehydes, esters, ethers, hydrocarbons, carboxylic acids, amines, halogen compounds and simple aromatic compounds. Appearance and significance of isotopic peaks.Structural elucidation of simple organic molecules with the application of spectral techniques- Problems involving combination of spectral data.

#### **UNIT-IV SYNTHETIC METHODOLOGY**

An introduction to synthons and synthetic equivalents, functional group interconversions, Planning and execution of multistep synthesis- overall yield calculation for multistep synthesis- synthesis of simple molecules. The importance of the order of events in organic synthesis, One group C-C disconnections – Alcohols and carbonyl compounds, regioselectivity, alkene synthesis, Olefination of carbonyl compounds, one group C-X and two group C-X disconnections, chemoselectivity, reversal of polarity, cyclization reactions, amine synthesis.

#### **UNIT-V PHOTOCHEMISTRY AND PERICYCLIC REACTIONS**

Principles of photochemical reactions; Photochemical excitation – fate of the excited molecules – Joblonski diagram – study of photochemical reactions of ketone – photoreduction – photocyclo addition – Paterno – Buchi reaction – di pi-methane and tri-pi methane rearrangement reaction. Pericyclic Analysis of electrocyclic, cyclo addition and sigmatropic reactions – correlation diagrams for butadiene – cyclobutene system, hexatriene systems. FMO and PMO approach, electrocyclic reactions, - conrotatory and dis rotatory motions,  $4n$ ,  $4n+2$  and allyl systems. Sigmatropic rearrangement, supra and antarafacial shifts of H Sigmatropic shifts involving carbon moieties, 3,3- and 5,5-sigmatropic rearrangement – Cope and Claisen rearrangement.

## CORE-8

## INORGANIC CHEMISTRY-III

### (Solid state, Bioinorganic and Nuclear Chemistry)

*Objectives:*

*After completion of the course the students will have the knowledge of*

- *Basic concepts describing structure of solids, Theories involves in diffraction by solids and properties of solids.*
- *Basis of nuclear moments and types of nuclear reactions*

#### **UNIT-I BASIC CONCEPTS IN SOLID STATE**

Lattice, unit cell, crystal systems and Bravais lattices-Miller indices and labelling of planes –symmetry properties –crystallographic point groups and space groups –fundamentals of X-ray diffraction- Laue equation and Brag's law- powder and single crystal X-ray diffraction-Scherrer formula-systematic absences, reciprocal lattice-structure factor and intensity- electron density maps- electron and neutron diffraction.

#### **UNIT-II INORGANIC SOLIDS**

Structures of rock salt –cesium chloride-wurtzite –zinc blende –rutile –fluroite –antifluorite-diamond and graphite –spinel –normal and inverse spinels and perovskite –lattice energy of ionic crystals –Madelung constant-Born-Haber cycle and its applications. Defects- types of defects-non – stoichiometry – point defects in solids – Schottky and Frenkel defects- colour centers – linear defects –dislocations – effects due to dislocations- Metallic state – free electron and band theories- insulator, semiconductor, -intrinsic and extrinsic semi conductors- Types of magnetic behaviours of solids.

#### **UNIT-III BIO-INORGANIC CHEMISTRY**

Transport proteins-Oxygen carriers-metalloenzymes, carboxy peptidase, carbonic anhydrase, redox process, iron-sulphur proteins, chlorophyll- salient features of the photo synthetic process- vitamin B12-the role of sodium, potassium, calcium, zinc and copper-sodium-potassium pumps- fixation of nitrogen, nitrogen cycle.

#### **UNIT-IV NUCLEAR CHEMISTRY-1**

Nuclear properties: Nuclear spin and moments, origin of nuclear forces, salient features of the liquid drop and the shell models of the nucleus. Models of Radioactive Decay: Orbital electron capture: nuclear isomerism, internal conversion, detection and determination of activity by cloud chamber, nuclear emulsion, bubble chamber, G.M., Scintillation and Cherenkov counters. Nuclear Reactions: Types, reactions, cross section, Q-value, threshold energy, compound nucleus theory: high energy nuclear reactions, nuclear fission and

fusion reactions as energy sources; direct reactions; photonuclear and thermo nuclear reactions.

## **UNIT-V NUCLEAR CHEMISTRY-2**

Stellar energy: synthesis of elements, hydrogen burning, carbon burning, Nuclear Reactors: fast breeder reactors, particle accelerators, linear accelerators, cyclotron and synchrotron.

Radio Analytical Methods: Isotope dilution analysis, Radiometric Titrations, Radio 36mmune assay, Neutron activation analysis.

## CORE-9

## PHYSICAL CHEMISTRY-III

### (Electrochemistry and Spectroscopy)

*Objectives:*

*After this course the student should be able*

- *To understand the behavior of electrolytes in solution.*
- *To know the structure of the electrode surface.*
- *To differentiate electrode kinetics from other types kinetic studies.*
  
- *To make the students knowledgeable in nuclear chemistry.*
- *To learn the applications of spectroscopy for the study and structural elucidation of molecules.*
- *To apply the principles of mass, UV-Visible, IR, NMR, ESR, Photo electron spectroscopy.*
- *To know the application of spectroscopy to study the structure of molecules.*

#### **UNIT-I ELECTROCHEMISTRY-I**

Kohlrausch law and its applications-Debye-Huckel-Onsager equation-Derivation-validity of DHO equation-deviation of DHO equation-conductance of high field and high frequency-Electro kinetic phenomena-Electro capillary phenomenon-Lipmann's equation-Zeta potential and its applications.

Introduction to electrical double layer-Evidences for electrical double layer.

Structure of electrified interface-Helmholtz-Perrin, Guoy-Chapmann and Stern models of electrical double layer.

#### **UNIT-II ELECTROCHEMISTRY-II**

Overpotential-Elementary electron electrode process. Butler-Volmer equation-Exchange current density and symmetry factor-Experimental determinations-Electrode rectification. Nernst equation as a special case of Butler-Volmer equation-Reaction resistance-Polarisable & non-polarisable electrodes-Low and high field approximations-Tafel equations. Corrosion and its prevention. Fuel cells-Classification-Chemistry of fuel cells-detailed description-ion-selective electrodes.

#### **UNIT-III PHASE RULE AND SPECTROSCOPY-I**

Phase equilibria-Gibb's phase rule-Condensed systems-Application to three component systems-Graphical representation-Systems of three liquids-System consisting of two salts and water-Perihydric and cryohydric systems.

Classification of molecules-Rigid rotor model-Effect of isotopic substitution on the transition frequencies-Non-rigid rotor-Applications-Vibrational energies of diatomic molecules-zero point energy-force constant and bond strengths-anharmonicity-vibration-rotational spectroscopy-P,Q,R branches-Vibration of poly atomic molecules-overtone-hot bands-far-IR region-Fermi-resonance.

## **UNIT-IV SPECTROSCOPY-II**

Classical and quantum theories of Raman effect-Stokes' and anti-Stokes' lines-Raman selection rules.

Rotational Raman spectra- linear molecules, symmetric top and spherical top molecules; Vibrational Raman spectra-symmetry and Raman active vibrations, rule of mutual exclusion; Rotation-Vibration Raman spectra of diatomic molecules. Resonance Raman spectroscopy-Coherent anti-Stokes Raman Spectroscopy (CARS)-Applications.

## **UNIT-V PHOTOCHEMISTRY**

Franck-Condon principle-Jablonskii diagram-primary and secondary processes-Flourescence and phosphorescence-Quantum yield-Chemical actionometry-Photosensitization, chemiluminescence-kinetics of unimolecular photophysical processes-Kinetics of photochemical processes-H<sub>2</sub> and Cl<sub>2</sub> reaction-Excimers and Exciplexes. Mechanism of fluorescence quenching-Stern-Volmer equation and its applications.

Photo-Voltaic cells-Photo-assisted electrolysis of water-Aspects of solar energy conversion.

## **ELECTIVE-3A**

## **GREEN AND SUSTAINABLE CHEMISTRY**

*Objectives:*

*After this course the student should be able*

- *To understand the advantages and importance of green chemistry.*
- *To look for green chemistry strategies for designing the chemical synthesis.*
- *To know the solvent free synthesis using MWI.*
- *To make the students knowledgeable in solar energy conversion.*

### **UNIT-I GREEN CHEMISTRY**

Introduction: Prospects and future of Green Chemistry, Twelve guiding principles of green chemistry. Concept of atom economy. Green starting materials, Green reagents, Green solvents and reaction conditions, Green synthesis- Real world cases (Traditional Vs. Green processes) Synthesis of Ibuprofen, Adipic acid. Biomimetic, multifunctional reagents; Combinatorial green chemistry; Non-covalent derivatization.

### **UNIT-II GREEN TECHNOLOGIES**

*Green Solvents:* Enhancement of selectivity, efficiency, and industrial applicability-Ionic liquids-Supercritical fluids-Solvent free neat reactions in liquid phase-Fluorous phase reactions

*Green Catalysis:* Heterogeneous catalysis: Use of zeolites, silica, alumina, clay, polymers, cyclodextrins, and biocatalysts.

### **UNIT-III MICROWAVE AND ULTRASOUND MEDIATED ORGANIC SYNTHESIS**

Microwave assisted reactions, Microwave activation – advantage of microwave exposure – specific effects of microwave – Neat reactions – solid supported reactions – Functional group transformations – condensation reactions – oxidation – reduction reactions – multi-component reactions.

Ultrasound assisted reactions, ultrasound for waste water treatment, cleaning and organic synthesis– oxidation– reduction reactions.

### **UNIT-IV IONIC LIQUIDS AND PTC**

Introduction – synthesis of ionic liquids – physical properties – applications in alkylation – hydroformylations– epoxidations – synthesis of ethers – Friedel-Craft reactions – Diels-Alder reactions – Knoevenagel condensations – Wittig reactions – Phase transfer catalyst - Synthesis – applications.

### **UNIT-V NEW ENERGY SOURCES FOR NEW CENTURY**

Renewable energy sources-Introduction to solar energy- Biomass conversion-Sea wave energy-tidal energy-geo-thermal energy-wind energy-nuclear fusion energy. Splitting of water-hydrogen from sunlight-hydrogen economy.

Fuel cells-batteries-photovoltaic cells. Nuclear energy-Nuclear fission and fusion-Production of electricity by nuclear reactor-radioactivity and hazards of radioactivity-living with nuclear power-Management of radioactive waste.

### **Reference Books**

2. Mike Lancaster , Green Chemistry and Introductory text, II Edition
3. P.T.Anastas and J.C Warner, Green Chemistry theory and Practice, Oxford University press, Oxford (1988).
4. V.K. Ahluwalia, Methods and Reagents of Green Chemistry: An Introduction by Green Chemistry, Ane Books India, 2006.
5. Green Chemistry – Environment friendly alternatives- edited by Rashmi Sanghi & M. M. Srivastava, Narora Publishing House, (2003).

## **ELECTIVE-3B SURFACE ANALYTICAL TECHNIQUES & SENSORS**

*Objectives:*

*After this course the student should be able*

- *To understand the principles of ECSCA, SERS and other techniques.*
- *To know the principles and application of electroanalytical techniques.*
- *To apply the student knowledge in the importance of sensor*
- *To make the student knowledgeable in the application of biosensors.*

### **UNIT-I SURFACE ANALYTICAL TECHNIQUES-1**

Electron Spectroscopy for Chemical Analysis (ESCA): Principles, Instrumentation, and Analytical Applications. Auger electron spectroscopy: Principles, Instrumentation, Applications. Secondary ion mass spectrometry (SIMS): Principles, Instrumentation, Applications.

Surface enhanced Raman Spectroscopy (SERS): Principles, Instrumentation, Nanoparticulate SERS substrates, Surface enhanced resonance Raman scattering (SERRS), SERRS of Ag and Au metal colloids, Thin solid films, Langmuir-Blodgett Monolayers.

### **UNIT-II SURFACE ANALYTICAL TECHNIQUES-2**

Mapping and imaging, Applications. Electron Energy Loss Spectroscopy (EELS): Principles, Instrumentation, Applications. Electron Microprobe analysis: Principles, Instrumentation, Analysis of semiconductors and crystalline materials, Applications. Low Energy Ion Scattering Spectroscopy: Principle, Instrumentation, Surface structural analysis.

### **UNIT-III CHEMICAL SENSORS**

Importance of Sensors, Biomolecular recognition elements, Artificial molecular-recognition materials, Molecular imprinted polymers, Electrode modification. Fluorescence, chemi and bio-luminescence sensors, Fluorescent tag molecules, Applications.

### **UNIT-IV ELECTROCHEMICAL SENSORS**

Conductometric sensors, Coulometric sensors, Voltammetric sensors, Applications, Neurotransmitters, Amperometric sensors, Chronoamperometric analysis, Multichannel sensors, Microelectrode sensors, Electrochemical Impedance Sensors, Quartz crystal nanobalance sensors.

### **UNIT-V BIOSENSORS**

Molecular recognition, Applications. Surface Plasmon resonance based sensors, Fiber optic sensors, Two dimensional microarray based sensors, Applications for Food Safety – Mycotoxins, adulterants, Biomedical diagnosis – Cancer markers.

6. John F Watts, John Wolstenholme, An Introduction to Surface Analysis by XPS and AES, 2<sup>nd</sup> Edition, Wiley VCH, 2011.

## **COMPUTATIONAL METHODS IN CHEMISTRY AND CHEMOMETRICS**

*Objectives:*

*After this course the student should be able*

- *To understand the basic knowledge of use of computer in chemistry.*
- *To know the software use in drawing the chemical structures.*
- *To apply the student knowledge in chemometrics.*
- *To make the student knowledgeable in the application of numerical methods of analysis.*

### **UNIT-I      COMPUTER BASICS**

Windows and Linux; MSOFFICE; Statistical Data Processing and Curve Fitting by EXCEL, GRAPHER, SURFER and MATHEMATICA; Chemical Structure Drawing by ISIS Draw, CHEMWIND, ACD Labs and CHEMDRAW; Molecular Modeling by ACD Labs, PCWIN and CHEM 3D; Chemical Databases; Animations and Virtual Chemical Experiments

### **UNIT-II      FORTRAN 77**

Types of Constants and Variables in Fortran, Dimension, Data, Type, COMMON and EQUIVALENCE statements, Arithmetic and Logical IF, IF-THEN ELSE Constructs, DO statement, Various types of I/O statements, Library functions, Statement functions, Function subprograms and subroutine subprograms with suitable examples.

### **UNIT-III      NUMERICAL METHODS**

Roots of Polynomials, Solution of Linear simultaneous equations, matrix multiplication and inversion. Numerical integration. Statistical treatment of data, variance and correlations, Least square curve fitting.

### **UNIT-IV      COMPUTER APPLICATION**

Role of computer in research, data organization, software selection and its applications, solving problems by using scientific software & tools, sample programmes for analysis of data.

Computer Searches of Literature: ASAP Alerts, CA Alerts, SciFinder, ChemPort, ScienceDirect , STN International-Journal home pages.

### **UNIT-V      CHEMOMETRICS**

Introduction to Chemometrics, principles of experimental design, factorial and fractional factorial design, specific applications. Response surface methodology and Optimization, Response surface designs, Sequential optimization, specific, numerical problems. Modelling and Knowledge processing: multiple linear regressions, test parameter estimation, PCR, PLS, PCA etc. Cluster analysis and discriminant analysis, Modeling of multiway regression.

4. Brereton, R.G, Chemometrics: Data Analysis for the Laboratory and Chemical Part, Wiley, 2003.

## **PRACTICAL-7            ORGANIC CHEMISTRY PRACTICAL - III**

### **Chromatographic Separations**

Column chromatography - separation of anthracene and picric acid from anthracene picrate.

Thin layer chromatography separation of green leaf pigments.

Paper chromatography-Identification of amino acid.

### **Any FOUR Estimations**

Estimation of aniline

Estimation of phenol

Estimation of glucose

Estimation of amino group

Estimation of amide group

Saponification of fat or oil

Iodine value of an oil

Estimation of sulphur in an organic compound

Estimation of methyl ketone

### **Special Interpretation Of Organic Compounds-UV, IR, PMR and MASS Spectra of the following 15 compounds**

1, 3, 5- Trimethyl benzene

Pinacolane

n-Propylamine

p-Methoxy benzyl alcohol

Benzyl bromide

Phenylacetone

2-Methoxyethyl acetate

Acetone

Isoopropyl alcohol

Acetaldehyde diacetate

2-N,N-Dimethylamino ethanol

Pyridine

4-Picoline

1,3-dibromo-1,1-dichloropropene

Cinnamaldehyde

### **Reference Books**

## PRACTICAL-8

## INORGANIC CHEMISTRY PRACTICAL – III

### Analysis of Alloys

Estimation of tin and lead in solder.

Estimation of copper and zinc in brass/Bronze.

Estimation of chromium and nickel in stainless steel.

### Analysis of Ores

Dolomite, Galena, Pyrolusite, Copper pyrites

### Quantitative Analysis

Quantitative analysis of mixtures of iron –magnesium; iron – nickel; copper – nickel and copper – zinc.

### List of Spectra to be given for interpretation.

$^{31}\text{P}$  NMR Spectra of methylphosphate

$^{31}\text{P}$  NMR Spectra of  $\text{HPF}_2$

$^{19}\text{F}$  NMR Spectra of  $\text{ClF}_3$

$^1\text{H}$  NMR Spectra of Tris (ethylthioacetanato) cobalt (III)

Explain high resolution  $^1\text{H}$  NMR spectra of (N-propylisonitrosoacetylacetonato) (acetylacetonato) Nickel (II)

ESR Spectra of the aqueous  $\text{ON}(\text{SO}_3)_2^-$  ion.

ESR Spectra of the H atoms in  $\text{CaF}_2$ .

ESR Spectra of the  $[\text{Mn}(\text{H}_2\text{O})_6]^{2+}$ .

ESR Spectra of the bis (salicylaldiminato) copper (II)

IR Spectra of the sulphato ligand.

IR Spectra of the dimethylglyoxime ligand and its Nickel (II) complex.

IR Spectra of carbonyls

Mossbauer spectra of  $\text{FeSO}_4 \cdot 7\text{H}_2\text{O}$

Mossbauer spectra of  $\text{FeCl}_3$ .

Mossbauer spectra of  $[\text{Fe}(\text{CN})_6]^{3-}$

Mossbauer spectra of  $[\text{Fe}(\text{CN})_6]^{4-}$

### Reference Book

J.Mendham, R.C.Denney, J D Barnes, M. Thomas and B. Sivasankar, Vogel's text book of quantitative chemical analysis, Pearson Educaion Ltd., Indian subcontinent edition, 2009.

## **PRACTICAL - 9**

### **PHYSICAL CHEMISTRY PRACTICAL – III**

1. Potentiometric titrations of a mixture of acids.
2. Precipitation titrations-  $\text{AgNO}_3$  vs.  $\text{KCl}$ .
3. Determination of pH and calculation of pKa.
4. Determination of the dissociation constant of weak acid using quinhydrone/calomel electrode.
5. Determination of strength of KI using potentiometric titration between FAS and KI.
6. Determination of strength of FAS using potentiometric titration between  $\text{KmnO}_4$  and FAS.
7. Experiment on precipitation titration of mixture of halides by EMF measurements.

#### ***Spectral Interpretation:***

Experiments given only to familiarize the interpretation of spectra provided. Interpretation of simple UV-Visible spectra of simple molecules for the calculation of molecular data and identification of functional groups (5 typical spectra will be provided).

IR and NMR spectral calculations of force constant – identification and interpretation of a spectra (5 each in IR and NMR will be provided).

#### **Reference Books**

1. Findlay`s practical Physical Chemistry, Revised and edited by B.P. Levitt, 9<sup>th</sup> edn., Longman, London, 1985.

3. Practical Physical Chemistry by B. Viswanathan and P.S. Raghavan, Viva publishers.

## **SEMESTER-IV**

### **CORE-10                    SCIENTIFIC RESEARCH METHODOLOGY**

#### *Objectives:*

- *To study about the importance of research, literature survey, error analysis, statistical treatment.*
- *To know the various indexes and abstracts in science and technology as a source of information in chemistry.*
- *To study about the conventions of writing thesis.*

#### **UNIT-I            MEANING OF RESEARCH**

Nature and importance of research-aims, objective, principles and problems-selection of research problems, purpose of research, scientific method, role of theory, characteristics of research. Types of research: fundamental or pure research, applied research, action research, historical research, experimental research.

#### **UNIT-II            CHEMICAL LITERATURE**

Sources of chemical information: primary, secondary and tertiary sources. Indexes and abstracts in science and technology: applied science and technology index, chemical abstracts, chemical titles, current chemical reactions, current contents, physics abstracts, science citation index. Beilstein compilations of data, synthetic methods and techniques, treatises, reviews.

#### **UNIT-III          CHEMICAL ABSTRACTS**

Current awareness searching: CA weekly issues, CA issue indexes. Retrospective searching: CA volume indexes-general subject index, chemical substance index, formula index, index of ring systems, author index, patent index. CA Collective indexes: Collective index (CI), decennial index (DI). Access points for searching CA indexes: index guide, general subject terms, chemical substance names, molecular formulas, ring systems, author names, patent numbers. Locating the reference: finding the abstract, finding the original document, chemical abstract service source index.

#### **UNIT-IV          SCIENTIFIC WRITING**

Scientific writings: research reports, theses, journal articles, and books. Requirement of technical communications: eliminating wordiness and jargon tautology, redundancy, imprecise words, superfluous phrases. Steps to publishing a scientific article in a journal: types of publications communications, articles, reviews; when to publish, where to publish, specific format required for submission, organization of the material. Documenting: abstracts-indicative or descriptive abstract, informative abstract, footnotes, end notes, referencing styles, bibliography-journal abbreviations (CASSI), abbreviations used in scientific writing.

#### **UNIT-V            COMPUTER SEARCHES OF LITERATURE**

ASAP Alerts, CA Alerts, SciFinder, ChemPort, ScienceDirect, STN International Journal home pages.

## **Reference Books**

8. Joseph, A. Methodology for Research; Theological Publications: Bangalore, 1986.

**UNIT-I PROTEINS AND NUCLEIC ACIDS**

Proteins: Peptides and their synthesis – Merrifield synthesis, Determination of N-terminal/C-terminal residues, Determination of tertiary structure of Protein, Bio-Synthesis of Proteins. Nucleic Acids: Types of Nucleic Acids-DNA & RNA polynucleotide chain. Components-biological functions. Structure and role of (genetic Code) DNA and RNA (Nucleotides only).

**UNIT-II STEROIDS**

Occurrence, nomenclature, basic skeleton, Diel's hydrocarbon and stereochemistry, Isolation, structure determination and synthesis of Cholesterol, Bile acids, Conversion of cholesterol into sex hormones such as androsterone, testosterone, estrone and progesterone. Biosynthesis of Cholesterol.

**UNIT-III THREE AND FOUR MEMBERED HETEROCYCLES**

Systematic nomenclature (Hantzsch-Widman system) for monocyclic, fused and bridged heterocycles. Three-membered and four-membered heterocycles-synthesis and reactions of aziridines, oxiranes, thiranes, azetidines, oxetanes, thietanes –Corey-Chaykovsky reaction, Darzens glycidic ester condensation, Hoch-Campbell aziridine synthesis, Jacobsen.Katsuki epoxidation.

**UNIT-IV FIVE AND SIX MEMBERED HETEROCYCLICS**

Synthesis and reactions of furan, pyrrole, thiophene and pyridines: Furans-Fiest Benary furan synthesis, Knorr and Paal-Knorr pyrrole synthesis, Pyrroles and pyrrolidines-Barton. Zard reaction. Hofmann-Loffler-Freytag reaction. Thiophenes-Hinsberg synthesis of thiophene derivatives. Oxazoles and isoxazoles- Robinson-Gabriel synthesis, Cook – Heilbron 5-amino-thiazole synthesis. Hurd.Mori 1,2,3-thiadiazole synthesis. Pyridines- Hantzsch (Dihydro)-pyridine synthesis. Skraup/Doebner von Miller reaction. Chichibabin (Tschitschibabin) pyridine synthesis.

**UNIT-V CONDENSED HETEROCYCLES**

Synthesis and reactions of benzopyrroles, benzofurans and benzothiophenes, Indoles. Indoles-Fischer indole synthesis, Madelung indole synthesis, Nenitzescu indole synthesis. Quinolines and isoquinolines- Bischler-Napieralski reaction. Friedlander synthesis. Meth-Cohn quinoline synthesis. Pfitzinger quinoline synthesis. Pyrrole-pyrroles, Furanopyrroles thienopyrroles, Coumarins, chromones, quinolizinium ions.

## **ELECTIVE-4A**

## **APPLICATION OF ANALYTICAL TECHNIQUES TO INORGANIC COMPOUNDS**

*Objectives:*

- *On the completion the course the students will have the knowledge of various analytical techniques.*
- *Insight into the concepts and interpretation of spectra of IR, Raman, NMR, EPR, Mossbauer, and NQR to characterise the Inorganic compounds*

### **UNIT-I INFRARED AND RAMAN SPECTROSCOPY**

Structural studies (involving IR and Raman spectroscopy) of coordination compounds containing the following molecules/ions and ligands -  $\text{NH}_3$ ,  $\text{H}_2\text{O}$ ,  $\text{OH}^-$ ,  $\text{SO}_4^{2-}$ ,  $\text{CN}^-$ ,  $\text{SCN}^-$ ,  $\text{NO}$ ,  $\text{O}_2$ ,  $\text{PR}_3$  and halides

### **UNIT-II NMR SPECTROSCOPY**

Different spin systems – chemical shifts and coupling constants (spin-spin coupling) involving different nuclei ( $^1\text{H}$ ,  $^{19}\text{F}$ ,  $^{31}\text{P}$ ,  $^{13}\text{C}$ ) interpretation and applications to inorganic compounds – Effect of quadrupolar nuclei ( $^2\text{H}$ ,  $^{10}\text{B}$ ,  $^{11}\text{B}$ ) on the  $^1\text{H}$  NMR spectra, Satellite spectra. Systems with chemical exchange – evaluation of thermodynamic parameters in simple systems – study of fluxional behavior of molecules – an elementary treatment of second order spectra – examples – NMR of paramagnetic molecules – isotropic shifts contact and pseudo-contact interactions – Lanthanide shift reagents.

### **UNIT-III EPR SPECTROSCOPY**

Theory of EPR spectroscopy - Spin densities and McConnell relationship – Factors affecting the magnitude of  $g$  and  $A$  tensors in metal species - Zero-field splitting and Kramers degeneracy – Spectra of  $\text{VO}(\text{II})$ ,  $\text{Mn}(\text{II})$ ,  $\text{Fe}(\text{II})$ ,  $\text{Co}(\text{II})$ ,  $\text{Ni}(\text{II})$  and  $\text{Cu}(\text{II})$  complexes – Applications of EPR to a few biological molecules containing  $\text{Cu}(\text{II})$  and  $\text{Fe}(\text{III})$  ions.

Magnetic properties:

Types of magnetism – Dia – para – ferro and antiferro magnetism. Magnetic properties of free ions – first order Zeeman effect – Second order Zeeman effect – states  $KT$  – states  $\ll KT$ . Determination of Magnetic moments and their applications to the elucidation of structures of inorganic compounds – temperature independent paramagnetism. Magnetic properties of lanthanides and actinides. Spin crossover in coordination compounds.

### **UNIT-IV MOSSBAUER SPECTROSCOPY**

Principle-Isomer shifts – Magnetic interactions – Mossbauer emission spectroscopy – applications to iron and tin compounds.

## **UNIT-V      NQR SPECTROSCOPY**

Characteristics of quadrupolar nucleus – effects of field gradient and magnetic field upon quadrupolar energy levels – NQR transitions – applications of NQR spectroscopy.

## **ELECTIVE-4B**

## **INSTRUMENTAL METHODS OF ANALYSIS**

*Objectives:*

- *On the completion the course the students will have the knowledge of various instrumental techniques.*
- *The students should have learnt data analysis and electroanalytical techniques.*

### **UNIT-I DATA ANALYSIS**

Definition of Terms – Mean, Median, Precision and accuracy; Errors in chemical analysis- systematic errors and random errors. Treatment of data – Basic statistical concepts and frequency distribution, Average and measure of dispersion; Significance of Gaussian distribution curves; Null hypothesis; confidence interval of mean, Criteria for rejection of data; Regression and correlation; quality control and control chart.

### **UNIT-II OPTICAL METHODS OF ANALYSIS**

Absorption spectrometry – Beer Lamberts law; Spectrophotometry: UV visible spectroscopy- photometric titrations; Fluorimetry, turbidimetry and nephelometry.

Flame Photometry–Theory, instrumentation and a few important applications; Atomic absorption spectroscopy (AAS) – Theory, instrumentation and applications; Atomic fluorescence. Infra-red spectroscopy – Theory and instrumentation – source, monochromators, detectors; dispersive and non dispersive instruments; sample handling techniques; qualitative analysis and quantitative applications.

Raman spectroscopy – Theory, instrumentation – source of radiation and detectors; few qualitative and quantitative applications; Resonance Raman spectroscopy.

### **UNIT-III NMR, ESR AND MOSSBAUER SPECTROSCOPY**

Nuclear Magnetic Resonance Spectroscopy –Theory, relaxation and saturation processes, Environmental effects; instrumentation – type of magnets, source, detector and sample handling; few application of proton NMR; qualitative and quantitative analysis.

Electron Spin Resonance –Theory, instrumentation and a few applications in qualitative and quantitative analyses.

Massbauer spectroscopy: principle, instrumentation – applications; molecular structure, isomerism, electronic structure.

### **UNIT-IV POLAROGRAPHY, AMPEROMETRY AND CHROMATGRAPHY**

Polarography – Theory, apparatus, DME, diffusion kinetic catalytic currents, current voltage curves for reversible and irreversible system, qualitative and quantitative application to inorganic systems.

Amperometric titrations – Theory, apparatus, types of titration curves, successive titrations and two indicator electrodes-applications.

TLC, Colum, gas, ion exchange, Gel permeation, Gas liquid chromatography-principle, retention time values, instrumentation, carrier gas, column, detectors- thermal conductivity, flame ionization and electron capture; few applications of GLC.

### **UNIT-V RADIOCHEMICAL METHODS**

Hot atom chemistry – the Szilard – chalmers process, chemistry of recoil atoms, chemical effects no radiative decay, solvated electron. Uses of radiations in the study of matter, neutron activation analysis, dilution analysis, dosimetry, synthesis of organic and inorganic compounds by irradiation, radiometric analysis, radiography.

## **ELECTIVE-4C ENVIRONMENTAL CHEMISTRY**

### *Objectives:*

*After this course the student should be able*

- *To understand the basic knowledge of natural cycles in the environment.*
- *To know the various pollutants affecting environment.*
- *To apply the student knowledge in preventing pollution.*

### **UNIT-I INTRODUCTION TO ENVIRONMENTAL CHEMISTRY**

Concept and scope of environmental chemistry, Environmental terminology and nomenclatures, Environmental segments, The natural cycles of environment (Hydrological, Oxygen, Nitrogen, Phosphorous and Sulphur cycles).

### **UNIT-II ATMOSPHERE**

Regions of the atmosphere, Reactions in atmospheric chemistry, Earth's radiation balance, Particles, ion and radicals in the atmosphere, stratospheric chemistry: The chemistry of ozone layer, The role of chemicals in ozone destruction, The green-house effect and Global warming, El-Nino phenomenon.

### **UNIT-III LITHOSPHERE**

The terrestrial environment, Soil formations, Soil properties (physical/chemical), inorganic and organic components in soil, acid-base and ion-exchange reactions in soil, micro and macro nutrients, nitrogen pathways and NPK in soil, waste and pollutants in soil, waste classification and disposal.

### **UNIT-IV AIR POLLUTION**

Air pollutants (sources, classification, sampling and monitoring): Particulates, Aerosols, SO<sub>x</sub>, NO<sub>x</sub>, CO<sub>x</sub> and hydrocarbon emission, Photochemical smog, Autoexhausts, Acid-rains, Air-quality standards. Method of control of air pollution: Method of control of air pollution, electrostatic precipitation wet & dries scrubber, filters, gravity and cyclonic separation, Adsorption, absorption and condensation of gaseous effluent

### **UNIT-V WATER POLLUTION**

Water pollutants (sources, sampling and monitoring), Water-quality parameters and standards: physical and chemical parameters (colour, odour, taste and turbidity), Dissolved oxygen, BOD, COD, Total organic carbon, Total nitrogen, Total sulfur, Total phosphorus and Chlorine, Chemical speciation. Method of control of water pollution: Water and waste water treatment, aerobic and anaerobic, aeration of water, principle of coagulation, flocculation, softening, disinfection, demineralization and fluoridation.

Field of Project – Organic / Inorganic / Physical Chemistry  
No. of hours/week : 20  
No. of Credit : 10

**Supervisor & research topic:**

The guide and area of research should be allotted to each student before the end of third semester. Each guide shall have a maximum of five students.

**Plan of Work:**

The student should prepare the plan of project work with due consultation of guide and get the approval of the Head of the Department. In case the student wants to avail the facility from other University/laboratory, they will undertake the work with the permission of the guide and acknowledge the facilities utilized by them.

The duration of the dissertation research shall be a minimum of three months in the fourth semester.

**Dissertation Work outside the Department:**

In case the student stays away for work from the Department for more than one month, specific approval of the Head of the Department should be obtained.

**No. of copies of dissertation:**

The students should prepare four copies of dissertation and submit the same for the evaluation by Examiners. After evaluation, one copy is to be retained in the Department library and one copy is to be submitted to the University (COE) and one copy each can be held by the guide and student.

**Format to be followed:**

The format/certificates for dissertation to be submitted by the students are given below:

Format for the preparation of project work:

- (a) Title page
- (b) Certificate from the guide
- (c) Declaration of Student
- (d) Acknowledgement
- (e) Table of contents

### **CONTENTS**

<b>Chapter No.</b>	<b>TITLE</b>
1.	Introduction
2.	Review of Literature
3.	Materials and Methods
4.	Results and Discussion
5.	Summary
6.	References
